### **DETAILED ACTION**

This application was filed 10/16/2006 and is a 371 of PCT/GB04/05331 (12/17/2004) which claims priority to UK 0329236.4 (12/17/2003). Claims 25-48 are before the Examiner.

#### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 25-48 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claims are drawn to the polymorph of erythromefloquine hydrochloride. However, the art general teaches that identity can be established by 10 XRPD peaks (Brittain, 1999, p 236) and peak location and relative intensity may also be provided. Melting points alone are not sufficient to identify any particular form since melting points can be very close. The instant claims contain such as 25 a) contain only two points. This is not sufficient for identification. 25i) is not sufficient to show possession because very many crystalline forms are thick columns, cuboids, cubes or cube-like particles.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 25-48 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Specifically, the identity of the polymorph of claim 25 is unclear due to both b) and c) having peaks that are not the same. Are these claiming the same form of erythromefloquine hydrochloride? 25f), g) and h) all have different solvates. These appear to be patentably different polymorphs of solvates that are not encompassed by the first line of claim 25. Claim 26 appears to be improperly dependent from claim 25 due to the one or more parts of claim 25 from which claim 26 depends from. The process claim 43 does not state after step a) or b) what is made. Is an intermediate made? Or is the final product made? If all these claims depend ultimately from claim 25, then is the hydrochloride being claimed? Or is it the solvate being claimed? Clarification is required.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 25-48 are rejected under 35 U.S.C. 102(b) as being anticipated by Broger US Patent 5514805. Broger teaches in example 27 that erythro isomer of mefloquine hydrochloride was crystallized (lines 16-18 col 13). These crystalline forms appear to be in cube-like structures. This reads upon the compounds of claim 25 and all other claims.
